ERPNEXT · CRM · INTERNAL TRAINING

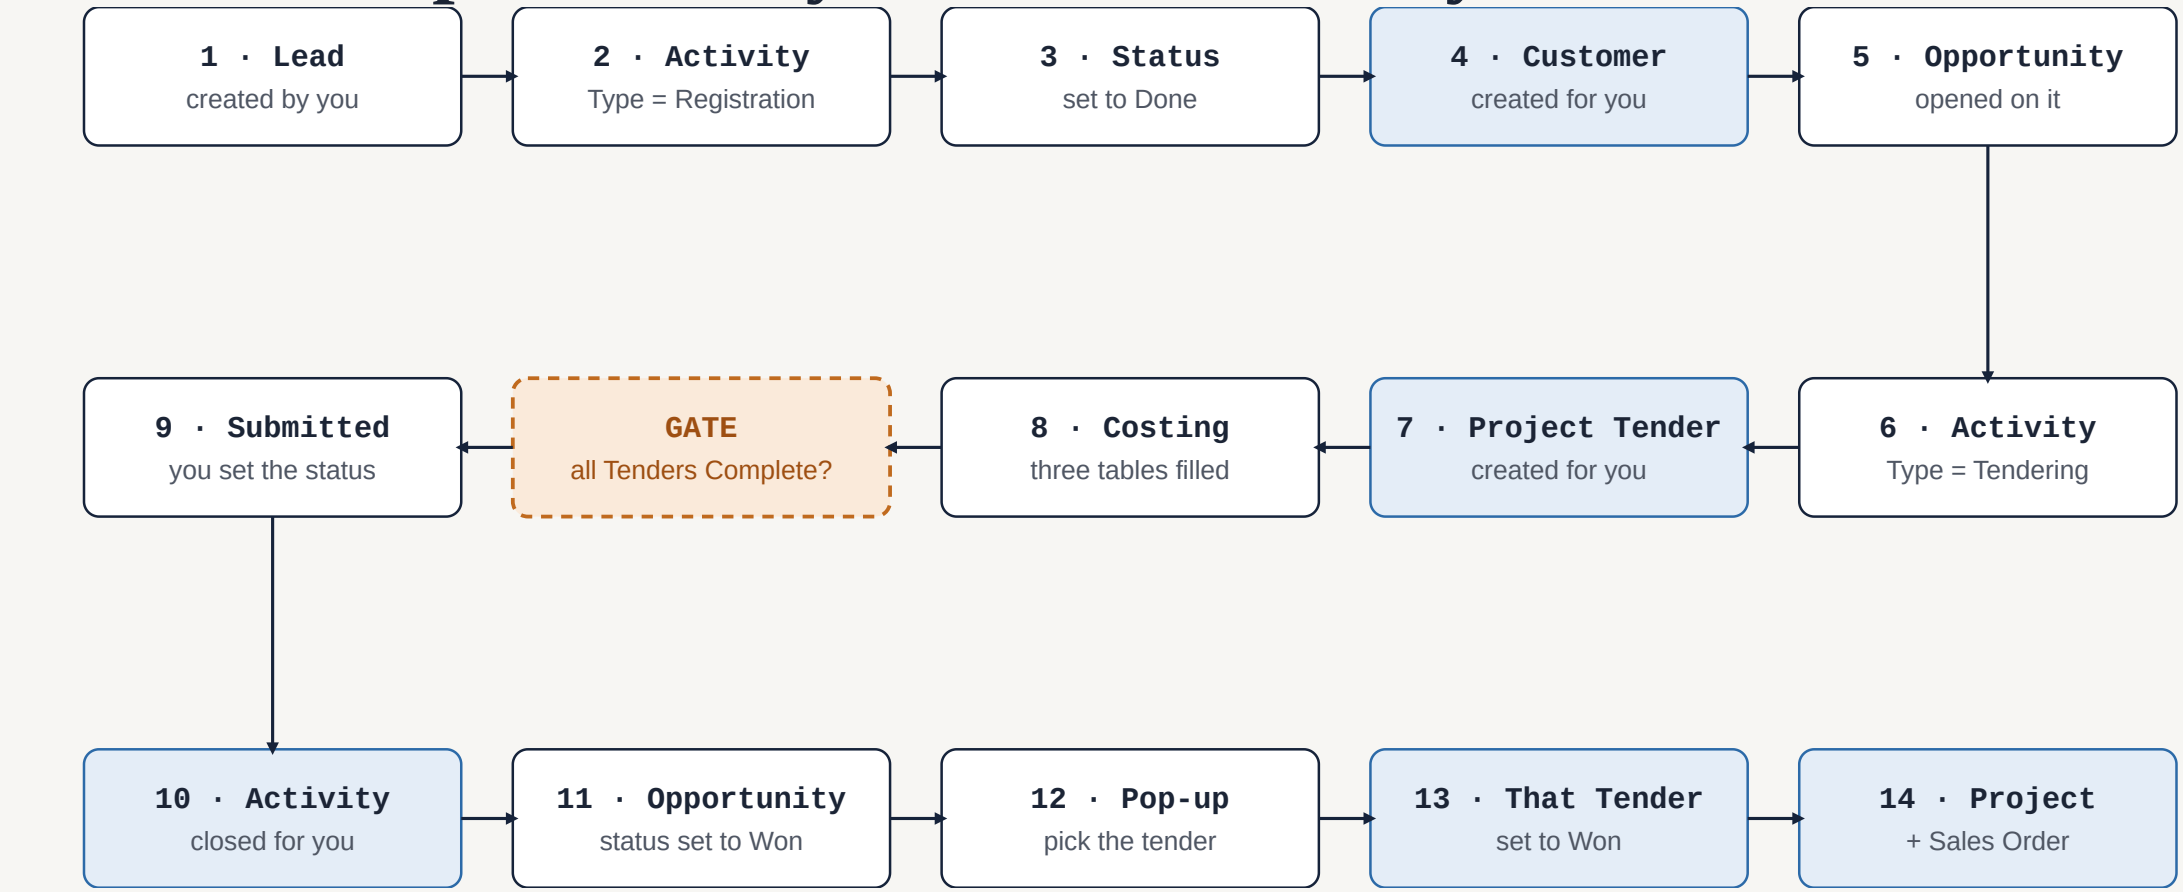

The CRM Workflow, End to End

How a Lead becomes a Customer, an Opportunity becomes a Project Tender, and a Project Tender becomes a win — and which part of that you do by hand.

Lead → Customer → Opportunity → Project Tender → Won

THE WHOLE PATH

Fourteen steps, and only nine of them are yours

You do this by hand · The system does it on save · A condition that will block you

WHAT THE SYSTEM DOES FOR YOU

Eight automations, and what sets each one off

WHAT YOU SAVE		WHAT THE SYSTEM DOES, ON THAT SAVE
A `Registration` Activity on a Lead	AUTO	Lead → `In Process`
`Any` Activity on a Lead set to `Done`	AUTO	Lead → `Qualified`
That Registration Activity → `Done`	AUTO	`Customer` created · Lead → `Converted`, `Date of Convert` stamped
A `Tendering` Activity on an Opportunity	AUTO	`Project Tender` created, Opportunity → `Tendering`
A `Tender` raised under a Project Tender	AUTO	Its `Submission Deadline` is filled from the Opportunity's `Expected Closing Date`
A Tender marked `Complete`	AUTO	`Completion Date` stamped, and shown on its row in the Project Tender
The Project Tender → `Submitted`	AUTO	Its Tendering Activity → `Done`, `Submitted Date` stamped
The Opportunity saved as `Won`	AUTO	The approved tender → `Won` + its Project and Sales Order · `Won Date` on both

Every one of these fires on save — nothing waits for a nightly job, and nothing needs a button pressed afterwards. The dates are stamped once, on the save that moves the status, and never change afterwards. One gate goes with the last row: the pop-up that asks which tender was approved offers only tenders that are **Submitted**.

RUNNING QUIETLY IN THE BACKGROUND

The parts of each record that fill themselves

Lead

Activities
its own Activities, oldest first,
rebuilt on every save and delete

Contacts
its own, plus every Opportunity's
and the Customer's it became

Qualification Status
moved by its Activities,
never by hand

Date of Convert
the day it became Converted,
by whichever route got it there

Opportunity

Activities
its own Activities, oldest first

Project Tenders
every tender it raised, with its
status, value and stage dates

Contacts
its own contacts only, so the deal's
list stays clean

Won Date
the day it was won, beside the
tender that was approved

Project Tender

Client
from the Opportunity — a Lead or
Prospect is converted first

Direct Cost Details
Tenders join while Draft or Under
Review; a Cancelled one leaves

Opportunity · Leads Activity
the link back to what created it

Submitted · Won · Completion dates
stamped as each status is reached,
the last one per Tender in the table

Totals stay in step

Edit a Tender and its cost and sell amounts are pushed into every Project Tender that lists it, and the totals recalculated.

An audit trail throughout

Every automatic step leaves a comment on the record it changed, with a link back to whatever triggered it.

Nothing here is yours to keep up to date. The blue blocks are rebuilt by the system every time something they depend on is saved — and the dates among them are written once, the day each status is reached.
